Amnios® and Amnios® RT
Flowable human allograft amniotic fluid

Two configurations available
- Cryopreserved (Amnios®)
- Ambient temperature (Amnios® RT)

Amniotic fluid is a versatile, powerful tissue which supports the development of the fetus in utero. The properties of amniotic fluid which benefit the fetus also make it an ideal material for providing lubrication and cushioning.¹

Allogenic human birth tissues, including amniotic fluid, may be used to provide cushioning and lubrication in the treatment of hip or knee osteoarthritis or plantar fasciitis. Published literature shows that amniotic fluid contains important growth factors, extracellular matrix molecules, hyaluronic acid, cytokines, and cells.¹

Amniotic fluid is recovered during planned cesarean sections and processed aseptically in a manner to preserve its inherent properties.

Amnios® and Amnios® RT are provided in an easy to apply flowable form for precise delivery to the intended site.

Tissue Safety

- Placental donors go through a rigorous prescreening qualification and are tested according to FDA guidelines for infectious disease
- Collection of the donor tissue is performed during planned cesarean section delivery by appropriately licensed personnel
- Tissue is processed in accordance with the Standards and guidelines established by the American Association of Tissue Banks (AATB)
